

Roger Freestone
Founder Director & Chief Examiner

I was a lecturer in a Further Education College for nearly 30 years.

The main subjects at the start of my teaching career were Mathematics and Engineering Science.

I moved departments to concentrate on GCSE Mathematics, Physics and 1st year 'A' level Mathematics.

For a number of years I was coordinator for the GCSE mathematics day and evening programmes.

From firstly teaching on the Access to Health & Science programme I became programme coordinator. This position involved writing part of the programme, assessing the overall programme, not only in the college I worked in but in other colleges initiating an Access programme.

I was also an assessor and external moderator for North East London Accreditation Federation.

My main role to date is Director and Chief Examiner of Equivalency Testing.

My responsibility is to ensure that our examinations and home work courses meet the requirements of the specification and that we maintain our high standards year on year.

I supervise the construction of Exam papers and mark schemes of all subjects to ensure appropriate standards are met and I am responsible for compiling a report evaluating candidates' performance in each examination. I oversee and participate in the Awarding process of all subjects.

From the initial concept of Equivalency Testing, to the present day I pride myself on the high standard of service we provide to all of our students their Universities and Employers.
